J. Schort in the regeneration of the nervous central system in adults. Block the regeneration of the nervous central system in adults. Instituted in reduction of the neuroscitic activity of Bcl-1 and Bcl-2. This is likely consecutive to their change in subcellular location, from the micochondria to the endoplasmic reticulum, after binding and sequestration.

J. SUBUNIT: Binds to RTNR. Interacts with Bcl-xl and Bcl-2.

J. SUBCELLULAR LOCATION: Integral membrane protein. Endoplasmic reticulum through 2 putative transmembrane of the endoplasmic reticulum through 2 putative transmembrane domains.
                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE=21069055; PubMed=11201742; DOI=10.1038/35053072;

Sequence 7290, Application US/09949016

Patent No. 6812339
GENERAL INPOWARTION:
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILE REFERENCE: CLOO1307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT PILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/231,768
PRIOR PILING DATE: 2000-10-20
PRIOR PILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-06-08
NUMBER: 60/231,498
PRIOR FILING DATE: 2000-09-08
NUMBER: FASE DE DIO NOS: 207012
SOFTWARE: FASES FOR Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                            APPLICANT: WENTER, J. Craig et al.

AAY53622-43 restromal cells.

```
to regulate hematopoiesis, and to treat myeloid or lymphoid cell
deficiencies. In addition, they may be used to support the growth and
proliferation of erythroid progenitor cells, and to treat various
anaemias. They can have colony stimulating factor (CSF) activity and can
be used to support the growth and proliferation of myeloid cells such as
granulocytes, monocytes or macrophages, to prevent or treat myelo-
suppression, to support the growth and proliferation of megakaryocytes
and platelets, thereby allowing prevention or treatment of platelet
cand platelets, thereby allowing prevention or treatment of platelet
conjunction with platelet transfusions, to treat stem cell disorders
conjunction with platelet transfusions, to treat stem cell disorders
conjunction with platelet transfusions, to treat stem cell disorders
conjunction with platelet transfusions, to treat stem cell disorders
conjunction with platelet transfusions, to treat stem cell disorders
conjunction with platelet transfusions, to treat stem cell disorders
conjunction with platelet transfusions, to treat stem cell disorders
conjunction with platelet transfusions, to treat stem cell disorders
conjunction with platelet transfusions, to treat stem cell disorders
conjunction with platelet transfusions, to treat stem cell compartment after irradiation or chemotherapy.
They can be used for growth or differentiation of bone, cartilage,
tendon, ligament, or nerve tissue, as well as for wound healing and
tissue repair and replacement, and in the treatment of burns, incisions
and ulcers, to induce cartilage and/or bone growth in circumstances where
bone is not normally formed and thus have an application in healing bone
for the control or differentiation or the platelet or properties and the base and thus have an application in healing bone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

neuroendocrine-specific protein. The MAGI protein can be expressed by standard recombinant methodology. The MAGI polypeptides, polynucleotides and antibodies are useful for treating diseases, including neuropathies, spinal injury, neuronal degeneration, neuromuscular disorders, psychiatric disorders and developmental disorders, cancer, stroke and inflammatory disorders. The polynucleotide is also useful for chromosome localization and for tissue expression studies. The present sequence

represents the human MAGI protein variant

The invention relates to human MAGI protein, which is similar to

Claim 2; Page 22; 35pp; English

Novel polypeptides related to neuroendocrine-specific proteins ar polynucleotides useful for diagnosis of various diseases and for treatment of cancer and neurological disorders.

The present sequence is that of human NOGO-B. NOGO-B is a previously known splice variant of the human NOGO gene on chromosome 2p21. The invention relates to a novel splice variant, NOGO-C (see ABB82348). It provides NOGO-C polypeptides and polynucleotides, and methods for producing such polypeptides by recombinant techniques. Also disclosed are methods for utilising NOGO-C polypeptides and polynucleotides in the treatment of diseases including neuropathies, splinal injury, brain injury, stroke, neuronal degeneration, for example Alzheimer's disease and Parkinson's disease, neuromuscular disorders, psychiatric disorders and developmental disorders. Also provided are methods for identifying agonists and agonists for use in treating conditions associated with NOGO-C imbalance, and diagnostic assays for detecting diseases associated with inappropriate NOGO-C activity or levels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a human stress-phosphorylated endoplasmic reticulum protein, designated Nogo B. Nogo B has cytostatic activity and is a modulator of the storage and exchange of calcium, cell growth and cellular stress response. It can: regulate oxidative stress; inhibit neurite outgrowth, neuron growth and axon regeneration. Nogo B polypeptides and polymucleotides are useful for modulating stress levels and cellular stress-response, cell growth and viability, diagnosis and treatment of cancer, malignant growth and other Nogo B related diseases. Nogo B polypeptides are also useful to screen combinatorial libraries to identify agonist or antagonist. Antibodies against Nogo B polypeptides are useful for affinity chromatography and distinguishing Nogo B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 AGLSAAPVPTAPAAGAPLMDFGNDFVPPAPRGPLPAAPPVAPERQPSWDPSPVSSTVPAP 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 AGLSAAPVPTAPAAGAPLMDFGNDFVPPAPRGPLPAAPPVAPERQPSWDPSPVSSTVPAP 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human RTN4B protein and coding sequence, useful for providing a cDNA sequence of human RTN4B. The protein is an isomer of RTN4 with RTN family members. The present invention also refers to polypeptide encoded by a nucleotide sequence and manufacturing method and application of the polypeptide and polypucleotide

Promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, comprises administering nervous system-specific activated T cells/antigen, or

The invention relates to promoting nerve regeneration or conferring

Example; Page 56-57; 93pp; English.

analogs/peptides.

```
complements of (a); (c) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under moderately stringent conditions; (e) sequences having at least 75% or 90% identity to (a); or (f) degenerate variants of (a). Polypeptides (ABP66596-1) and aptient and compositions comprising polypeptides (ABP66596 in a patient and compositions comprising polypeptides, polymolecities, artibodies, fusion proteins, T cell populations and antigen presenting cells expressing the polypeptide are useful in treating pancreatic cancer and simulating an immune response. The polymolecities can be used as probes or primers for nucleic acid hybridisation, in the design and probes or primers for nucleic acid hybridisation, in the design and proteins in the tumour cells, in vaccines and for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at ftp.wipo.int/pub/published_pot_sequences

central/peripheral nervous system (NS). The method involves administering NS-specific antigen, its analogue or its central/peripheral nervous system (NS). The method involves administering NS-specific antigen, its analogue or its peptide, a nucleotide sequence the NS-specific antigen, its analogue or its combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, where the injury is spinal cord injury, blunt camma, penetrating trauma, hemorrhagic stroke, ischaemic stroke or trauma, penetrating trauma, hemorrhagic stroke, ischaemic stroke or autoimmune disease or neoplasm. The disease results in a degenerative canned and in either gray or white matter or both. The disease is not an autoimmune disease or neoplasm. The disease results in a degenerative concess occurring in either gray or white matter or both. The disease is disease, is claim to a concept by, senile dementia, Alzheimer a disease, parkinson's claese, facial nerve (Bell's) palsy, glaucoma, Huntington's chorea, anyotrophic lateral sclerosis, non-arteritic optic neuropathy, and vitamine deficiency, intervertebral dise, hernistion, prion diseases such as Creutzfeldt-Jakob disease, carpal tunnel syndrome, peripheral concepty relain, hypoglycemia, Sjosyen blasson syndrome, acute sensory neuropathy, chronic ataxic neuropathy, billary cirrhosis, primary anyloidosis, obstructive lung diseases, acromegaly, malabsorption consolications of various diseases, including but not limited consory neuropathy, chronic ataxic neuropathy, billary cirrhosis, pathies, complications of various durgs (e.g., metronidazole) and toxins (e.g., alcohol or organophosphates), Charcot-Marie-Tooth disease, ataxia, edisease, or lipoproteinemia. The present sequence represents the human consorransmitter receptor protein Nogo-B, an example of NS-specific

This invention describes novel nucleic acid molecules that are associated with apoptosis and encode a polypeptide and are derived from a normalised gene library (embryonic or liver) or cone collections, and the extent of apoptosis measured by cell death detection assay or the CPRG assay (measuring loss of membrane integrity). The products of the invention have extostatic, neuroprotective, immunosuppressive, antitheumatic, on antiarthritic, dermatological, antiinflammatory, hepatotropic, virucide, notropic, anticonvulsant, antiparkinsonian, vasotropic, crebroprotective and antialcoholic activity and can be used for gene therapy. The polynucleotides also related vectors, hosts (or their certacts), encoded polypeptide (or their receptors) and/or agents that inhibit their activity (including antisense sequences) are used for treatment or prevention of tumours, autoimmune or despenarative diseases and viral infections, specifically leukaemia, carcinoma, sarcoma, multiple sclerosis, rheumatoid arthritis, diabetes, lupus, or infection
